

# CEToolbox Data Privacy

The CEToolbox application is a calculator for capillary electrophoresis. It aims to provide several information on the separation of compounds like the hydrodynamic injection, the volume of the capillary, the injection plug length or the quantity of injected analyte.

## User Data

The CEToolbox application does not use, store or collect any user related data.

## Application Data

The default values for the function parameters of the application are stored locally on the device where the application is used. They are not stored in a remote location or shared with other devices.
